

**48 miles per kernel.**

How much ethanol can a company extract from corn? Today, BASF helps increase both the quality and quantity of corn that farmers can grow. So it is now possible to improve corn supplies for ethanol production without reducing the crops intended for the kitchen table. And with more BASF agricultural innovations on the way, there's no telling how much mileage our efforts may yield down the road. Learn more at [basf.com/stories](http://basf.com/stories)
