WESTERN COLORADO ADDS ANOTHER E85 ETHANOL REFUELING SITE *Delta Station Offers E85 for .85 Cents per Gallon at Grand Opening*

Greeley (April 7, 2008) – The Colorado Corn Growers Association, the Colorado Corn Administrative Committee, the Governor’s Biofuels Coalition, and Western Convenience Stores are partnering to celebrate the opening of a new E85 pump location at 1502 Howard Street in Delta, Colorado.

E85 has much to offer as a renewable fuel that is homegrown and better for our environment than the petroleum alternative. It contains 85 percent ethanol and 15 percent gasoline. Consumers who drive Flex-Fuel Vehicles (FFV’s) can use any combination of E85 and gasoline.

With every new pump installation, more consumers have access to this renewable fuel. “We are glad to partner with the Governor’s Biofuels Coalition (GBC) and Western Convenience who are working to expand E85 throughout the state. By opening this refueling center, we provide Colorado’s agricultural producers and rural citizens an opportunity to buy this environmentally friendly and domestic-sourced fuel. Together, we are making a difference for Colorado’s air quality and for consumers who support renewable fuel,” says Mark Sponsler, CEO of Colorado Corn. “Western Convenience, GBC, and auto industry leaders like GM have been outstanding partners in this effort.”

The number of E85 fueling locations in Colorado has grown from 10 to 71 within the last 18 months. Western Convenience has invested in 16 of those locations, with another E85 pump in Grand Junction. The Colorado Corn Growers Association and GBC have provided a funding and support to Western Convenience.

Consumers who drive FFV’s will have an opportunity to save money by filling up for only .85 cents a gallon on Friday, April 11. Western Convenience is making E85 available for .85 cents a gallon from 10:00 a.m. to 12:00 a.m. in a promotional effort to highlight the availability of the fuel at the Western Convenience Store in Delta.

Join Colorado Corn, the GBC and Western Convenience as they celebrate the opening of the new E85 pump.

###

The Colorado Corn Growers Association and Colorado Corn Administrative Committee work on behalf of more than 4,000 corn producers through market development, communications, research, and technical assistance. See more about the work of both organizations at the www.coloradocorn.com website.
